END POINT SECURITY
ANTI-VIRUS PLUS SO MUCH MORE

Small to Medium business are more vulnerable than ever

There is a common phrase in the I.T industry - **'Attackers only get better (at what they do); never get worse'**. Considering all the ways that damage of harm can be introduced to a database or system, these days anti-virus is not enough. Your security needs to be on top of preventing all Malware (Malicious Software); the common forms being crypto-ransom ware, viruses, trojan horses, adware, spyware, scareware and phishing. The objective for any Malware is to deliberately cause harm to your data or system or increasingly these days, to extort money (crypto-ransom ware) where your files can be encrypted and only 'freed' when a ransom is paid.

Even in a small to medium business, data is like currency and therefore is just as attractive to attackers as a cash register at a corner store; Your bank details, your customer's visa card numbers, your work files….it's all worth a fortune to a potential Malware Developer. End-Point Security is the complete package that protects against all malware, across your site and in the cloud; going much further than just anti-virus.

ATTACKS COME IN MANY FORMS
- A click on a malicious link in a seemingly innocent email
- Opening an infected file from a known sender
- Advertisements on websites
- Remote access/break-ins
- Active or targeted hacking/exploit kits

Loyal I.T. Solutions has over 15 years experience of providing Central Coast businesses with reliable, professional and loyal I.T. hardware, software and support. Give us a call for a no obligations chat about how we can work together to help you achieve your business goals. Our team is waiting for your call.
